

Subject: Support Available for Activities at the National Institute for Mathematical and Biological Synthesis

Deadline Approaching! Support Available for Activities at the National Institute for Mathematical and Biological Synthesis

March 1, 2016 is the deadline for requests for support for Working Groups, Investigative Workshops, and Sabbatical Fellowships for activities beginning fall 2016 at the National Institute for Mathematical and Biological Synthesis (NIMBioS). All areas of research at the interface of biology and mathematics will be considered, but we are especially interested in activities expanding beyond the areas of research supported to date. Potential organizers of activities in areas of molecular biology, cell biology, network biology, immunology and systems biology are particularly encouraged to submit requests for support of Working Groups or Investigative Workshops. NIMBioS, located at the University of Tennessee-Knoxville, is an NSF-sponsored initiative to foster interdisciplinary research at the interface between mathematical and biological sciences. The institute's mission is to cultivate cross-disciplinary approaches in mathematical biology and to develop a cadre of researchers who address fundamental and applied biological problems in creative ways. Additional support for NIMBioS comes from the University of Tennessee-Knoxville. More details are posted at <http://www.nimbios.org/research/support>
