

David L Nieland

Subject: PhD Global change ecology in grasslands at Guelph

The MacDougall lab in the Department of Integrative Biology at the University of Guelph is currently recruiting Ph.D. students to join the lab in Fall 2016- spring/summer 2017.

Lab details can be found here:

http://www.uoguelph.ca/~amacdo02/MacDougall_Lab/Home%20Page.html

Our lab tests impacts of anthropogenic environmental change on the diversity and function of temperate grasslands. We work at several trophic levels (plant, insect, vertebrate) and spatial resolutions (local to global), integrating experimental and statistical approaches that test fundamental theory and its application to management.

The exact research topics for potential students are flexible.

Applicants should apply to asm@uoguelph.ca, sending your CV, marks, and a brief description of research interests.

Admission guidelines can be found
