**Subject:** Temporary ecology position in Austin, TX

We have posted a one year temp position working on Blackland Prairie bottomland conservation in the Austin, TX area. The posting is kind of hard to read, but we are putting together a prioritization matrix for conservation of floodplains in the Blackland Prairie ecoregion in the eastern part of Travis County. We need good plant skills, riparian experience and a working knowledge of GIS for both mapping and analysis. Please let me know if you have any questions.
