USACOE Hydric Soil Indicators Field Refresher Workshop

November 15 & 16, 2016

Pittsburgh, PA

Do you need to brush up on the USACOE hydric soil indicators?

Do you need some help with problem hydric soils?

If, so then this workshop is for you. The USACOE Hydric Soils Class is designed to give you experience with hydric soil evaluation using the latest USACOE field indicators. This two day classroom & field training is where you can gain hands-on experience with soil description, identification of hydric soil field indicators, and strategies for dealing with problematic soils including red-parent material and Piedmont floodplain soils.

During the hands-on field workshop we will set off into the swamp to explore several hydric soil sample sites. We will conduct field demonstrations and guide you with preparing a USACOE detailed soil description.
