

From: Sarah Princiotta
Subject: Undergraduate Internship at Field Station in NE PA

The Lacawac Sanctuary is a non-profit biological field station, 545-acre nature preserve, and environmental education center located in NE Pennsylvania. Founded in 1966, the Lacawac Sanctuary has a long history of supporting ecological research, providing public access to preserved natural lands, and providing innovative environmental education programs. Due to its pristine, protected nature Lake Lacawac serves as “living laboratory,” thereby providing a baseline for ecological study.

The Lacawac Sanctuary and Biological Field Station seeks an undergraduate intern for Summer 2017. The student will work with the Director of Research and Education on various Pocono lake monitoring projects and assist with outreach activities. They will spend considerable time conducting field work, completing laboratory analysis, and communicating science with the public via public programs.

A modest stipend and free housing is available at the Lacawac Sanctuary for the duration of the internship. A commitment of 20-30 hours per week is expected. Previous research experience is not required, but the strongest applicants will have experience and interest conducting environmental field and lab work, handling data, and communicating science with the public.

Submit letter of interest, CV, unofficial transcripts, application packet, and at least one letter of recommendation to Dr. Sarah Princiotta (sarah.princiotta@lacawac.org). More information and application packet can be found at www.lacawac.org/internships. Review of applications will begin on February 28, 2017.
