

From: Dennis DeVries
Subject: GRAs and postdoc- Auburn University

We are seeking individuals for several graduate student positions and for a postdoctoral associate position, all to participate on a large-scale Auburn University study of the effects of dams on riverine fish populations. This is part of an expanding and multi-faceted research program that already involves several graduate students working in the field (tracking), lab (behavioral/physiological work), and simulation modeling. We will be combining field tracking and sampling, lab behavioral/physiological experiments, and simulation modeling. As always, we are seeking motivated students and a postdoc who can work as a part of a team, both with us at Auburn and with other collaborators on the project.

Announcements for the positions can be found at:
