Paid benthic ecology internship – Fall 2017

Dauphin Island Sea Lab, Dauphin Island, AL

One paid intern position is available to work with Dr. Kelly Dorgan at Dauphin Island Sea Lab.

<http://polychaetes.org>

The intern will be working on two projects investigating the role of bioturbating benthic invertebrates in 1) acoustic sound propagation through marine sediment, and 2) oil-contaminated habitat. Work will primarily be in the lab sorting and identifying macrofaunal samples and helping to quantify physical aspects of marine sediment (shell hash, porosity, carbon and nitrogen content). The position will likely include some field work as well. Applicants should have or be pursuing a BS degree in biology, marine science, or a similar field and have previous research experience. This position will be 40 hrs/week for 3 months. Start date is negotiable but should be between mid-October and Jan. 8. Review of applications will begin October 9 and continue until the position is filled.

Please apply at:
