

**From:** Eric Schneider  
**Subject:** Tropical Marine Ecology Internship

---

Hello,

The Cape Eleuthera Institute in The Bahamas is now advertising for tropical marine ecology interns for this winter/spring to work in research, education, outreach and communications. Internships start January 17th 2018. Please see advertisement below and visit [www.ceibahamas.com/internships](http://www.ceibahamas.com/internships) for more information on applying.

"

CEI internships offer the chance to gain hands-on experience of research related to marine island ecosystems and their conservation, and environmental education in an amazing location. Our new intern programme is designed to support a new research initiative at CEI and provide an insight into the variety of aspects associated with a remote research and education facility, allowing all interns to get involved with a number of different projects across our organisation. CEI interns will have the opportunity to gain knowledge of a range of research techniques, including data collection in the field and wet laboratory, sample analysis in dry laboratories and data manipulation in the office. All our internships at CEI offer the chance to cross-train across different research themes, where scientists turn photographers, and educators can become researchers. Ultimately, our internships offer the chance to live, learn and work with people from a diversity of backgrounds, all sharing a passion for tropical marine island science conservation and education.

"

Thank you
