

# Paid Virtual Summer Internship Opportunity

*The USGS Nonindigenous Aquatic Species (NAS) Database is seeking qualified undergraduates or recent graduates for an invasive species-focused paid summer internship.*

## What is the NAS Database?

The NAS Database tracks the introduction and spread of non-native and invasive aquatic species throughout the U.S. Natural resource managers, policy makers, and scientists across the country rely on the database and its forecasting capabilities to help guide invasive species-related management and legislation.

**Interns will be provided a loaner laptop with necessary software and compensation for the 12 weeks. To apply, please send your resume a short letter of interest, please email Wesley Daniel ([wdaniel@usgs.gov](mailto:wdaniel@usgs.gov)) by May 1, 2021**

The USGS WARC is an equal opportunity employer and is devoted to promoting a diverse, equitable, and inclusive workplace. We strongly encourage all students and recent graduates regardless of background or identity to apply.

## As a USGS NAS Intern, you will:

- Work with scientists from the USGS Wetland and Aquatic Research Center (WARC) to develop digital products for publication.
- Learn practical and relevant science skills: ArcGIS, R coding, how to conduct systematic literature reviews, help develop and author a manuscript for scientific publication
- Participate in weekly seminars with professionals in invasive species research and management to learn about ongoing work and career paths within the federal government

## Successful candidates:

- Willing to commit 20 hours a week for 12 weeks to the internship
- Currently pursuing an undergraduate science degree
- Interested in invasive species science and issues
